Self-supporting warehouse with high speed stacker cranes –

Magazzino autoportante con traslo elevatori ad alta velocità

Automated warehouse with carousels - **Magazzini automatici a carosello**

Drive-in shelving - **Sistemi di scaffalature "drive-in"**

Pallet rack shelving with dedicated truck - **Scaffalature con carrello elevatore trilaterale**

Compactable modular warehouse - **Magazzini a moduli compattabili**

Dynamic system on rolls - **Sistemi di rulliere**

Heavy duty cantilever - **Scaffalature a bracci per alte portate**

AGV systems - **Sistemi AGV**

The Carousel warehouse range includes two, four and six layers of beams (depending on the building height)

La gamma di magazzini carosello comprende soluzioni con due, quattro e sei strati (a seconda dell'altezza dell'edificio)

Die Palette der Karussell-Lager umfasst Lösungen mit zwei, vier und sechs Schichten (abhängig von der Gebäudehöhe)

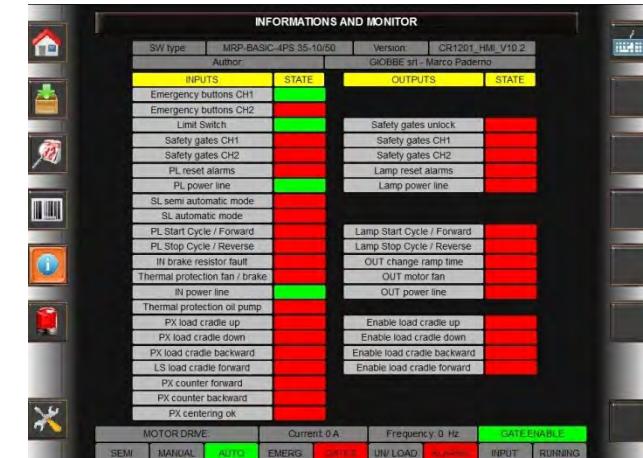

La gamme de stockeurs Carousel comprend des solutions avec deux, quatre et six couches (en fonction de la hauteur du bâtiment)

La gama de almacenes carrusel incluye soluciones con dos, cuatro y seis capas (dependiendo de la altura del edificio)

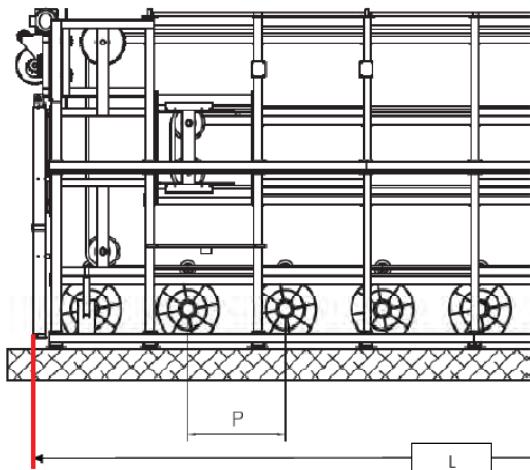

A gama de armazéns do carrossel inclui soluções com dois, quatro e seis camadas (dependendo da altura do edifício)

Döner depolama sistemleri iki, dört ve altı katlı (bina yüksekliğine bağlı olarak) seçenekler içerir

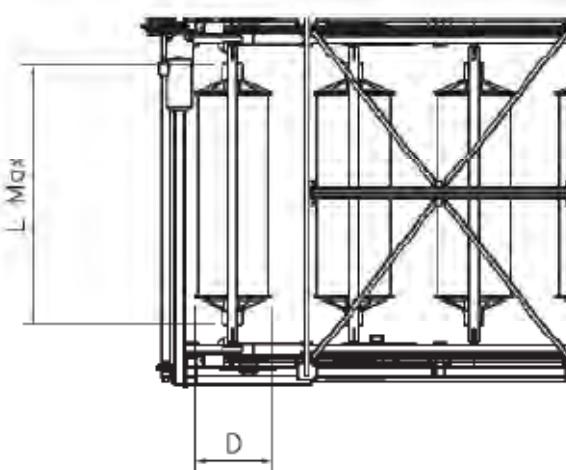

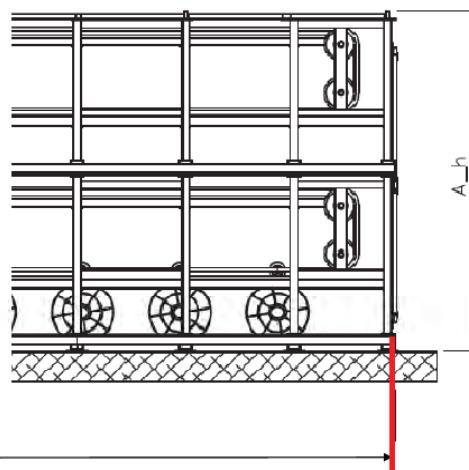

Диапазон Carousel складов включает в себя решения с двумя, четырьмя и шестью слоями (в зависимости от высоты здания)

MRP4-1 CAROUSEL WITH 1bar/1beam

MRP4-1 CAROSELLO a 4 livelli CON 1 subbio per ogni traversa

The MRP4-1 is mostly suitable for the storage and picking of warp beams and fabric rolls

Il carosello MRP4-1 è particolarmente adatto per lo stoccaggio e la gestione dei subbi e dei rotoli di tessuto

Der MRP4-1 eignet sich vor allem für die übersichtliche Lagerung und Verwaltung von Textilien und Kettbäumen

Le MRP4-1 est particulièrement adapté pour le stockage et la recherche ordonnée de pièces de tissu et d'ensouples

El MRP4-1 es especialmente adecuado para el almacenamiento ordenado y recolección de los rollos de tela y los plegadores

O MRP4-1 é especialmente adequado para a armazenagem ordenada e escolher de têxteis e Orgãos

MRP4-1 kumaş toplarını ve çözgü leventlerini yerden alarak depolamaya uygundur

MRP4-1 особенно подходит для упорядоченного хранения и собирание текстиля и навоев

The MRP can operate with FERBER trucks models CR, ET200, ET2001, BRG500, BZS, STK

Il magazzino MRP può essere alimentato dai carrelli FERBER modelli CR, ET200, ET2001, BRG500, BZS, STK

Das Lagerhaus MRP kann durch die FERBER- Modelle CR, ET200, ET2001, BRG500, BZS, STK beliefert werden

Le stockeur MRP peut être alimenté par charriots FERBER modèles CR, ET200, ET2001, BRG500, BZS, STK

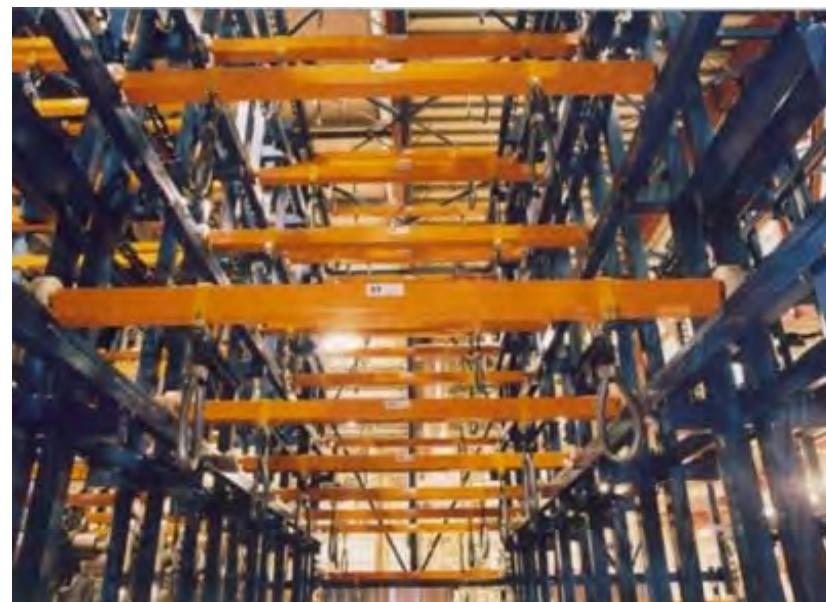

El almacén MRP puede ser alimentado por carretillas FERBER modelos CR, ET200, ET2001, BRG500, BZS, STK

O armazém MRP pode ser alimentado por carrinhos FERBER modelos CR, ET200, ET2001, BRG500, BZS, STK

The Carousel Range provides the maximum capacity in the minimum space.

The compact structure of MRP offers a considerable useful capacity of storage within minimum overall dimensions. The system can be integrated easily on several floors of the building, with multiple access points. Because of the high-density storage you achieve the highest possible capacity. Each MRP can be employed as a stand-alone solution or, if necessary, can be installed in an integrated system. This modular design offers maximum guarantee of investment for the future.

La gamma di caroselli consente la massima capacità nel minimo spazio.

La struttura compatta di MRP offre una notevole capacità utile di stoccaggio con un minimo ingombro in pianta. Il sistema può essere integrato facilmente su più piani dell'edificio, con vari punti di accesso. Grazie allo stoccaggio ad alta densità si ottiene la massima capacità possibile. Ogni MRP può essere impiegato come soluzione stand-alone oppure, se necessario, può essere inserito in un sistema integrato. Questa struttura modulare vi offre la massima garanzia dell'investimento per il futuro.

Maximale Lagerfläche auf minimaler Grundfläche.

Die kompakte Konstruktion des MRPs erlaubt eine erhöhte Lagerkapazität auf kleiner Grundfläche. Das System kann mühelos auf verschiedene Gebäudestücke mit verschiedenen Zufahrtstellen integriert werden. Es kann als Stand-alone-Lösung oder als integriertes System eingesetzt werden.

Diese Modular-Struktur bietet die maximale Investitions-Garantie für die Zukunft.

Capacité maximale en un minimum d'espace.

La structure compacte du MRP offre une capacité de stockage utile considérable avec un encombrement au sol minimum. Le système peut être intégré facilement sur plusieurs étages du bâtiment, avec des points d'accès multiples. Grâce au stockage à haute densité vous obtenez la capacité la plus élevée possible. Chaque MRP peut être utilisé comme une solution autonome ou, si nécessaire, peut être inséré dans un système intégré. Cette conception modulaire offre la meilleure garantie de pérennité de votre investissement.

Número máximo en el mínimo espacio.

La estructura compacta de MRP ofrece una gran capacidad de almacenamiento útil con unas dimensiones reducidas en el plan. El sistema se puede integrar fácilmente en varios pisos del edificio, con múltiples puntos de acceso. Gracias al almacenamiento de alta densidad se obtiene la mayor capacidad posible. Cada MRP puede ser empleado como una solución independiente o, si es necesario, se puede insertar en un sistema integrado. Este diseño modular ofrece máximas garantías de inversión para el futuro.

Capacidade máxima em espaço mínimo.

A estrutura compacta de MRP oferece uma capacidade de armazenamento útil considerável com dimensões totais mínimas no plano. O sistema pode ser integrado facilmente em vários andares do edifício, com vários pontos de acesso. Graças ao armazenamento de alta densidade que você começa a maior capacidade possível. Cada MRP pode ser empregue como uma solução isolada ou, se necessário, pode ser inserido num sistema integrado. Este projeto modular oferece máxima garantia de investimento para o futuro.

Minimum alanda maksimum depolama kapasitesi.

MRP kompakt yapısı ile asgari zemin alanı içerisinde mümkün olan en büyük depolama kapasitesini sağlar. Sistem birden fazla erişim noktaları ile binanın çeşitli katlarına kolayca entegre edilebilir. Yüksek yoğunluklu depolama sayesinde mümkün olan en yüksek kapasiteye ulaşılır. Her MRP tek başına veya gerekirse entegre edilerek kullanılabilir. Bu modüler tasarım gelecek yatırımlarınız için maksimum garanti sunar.

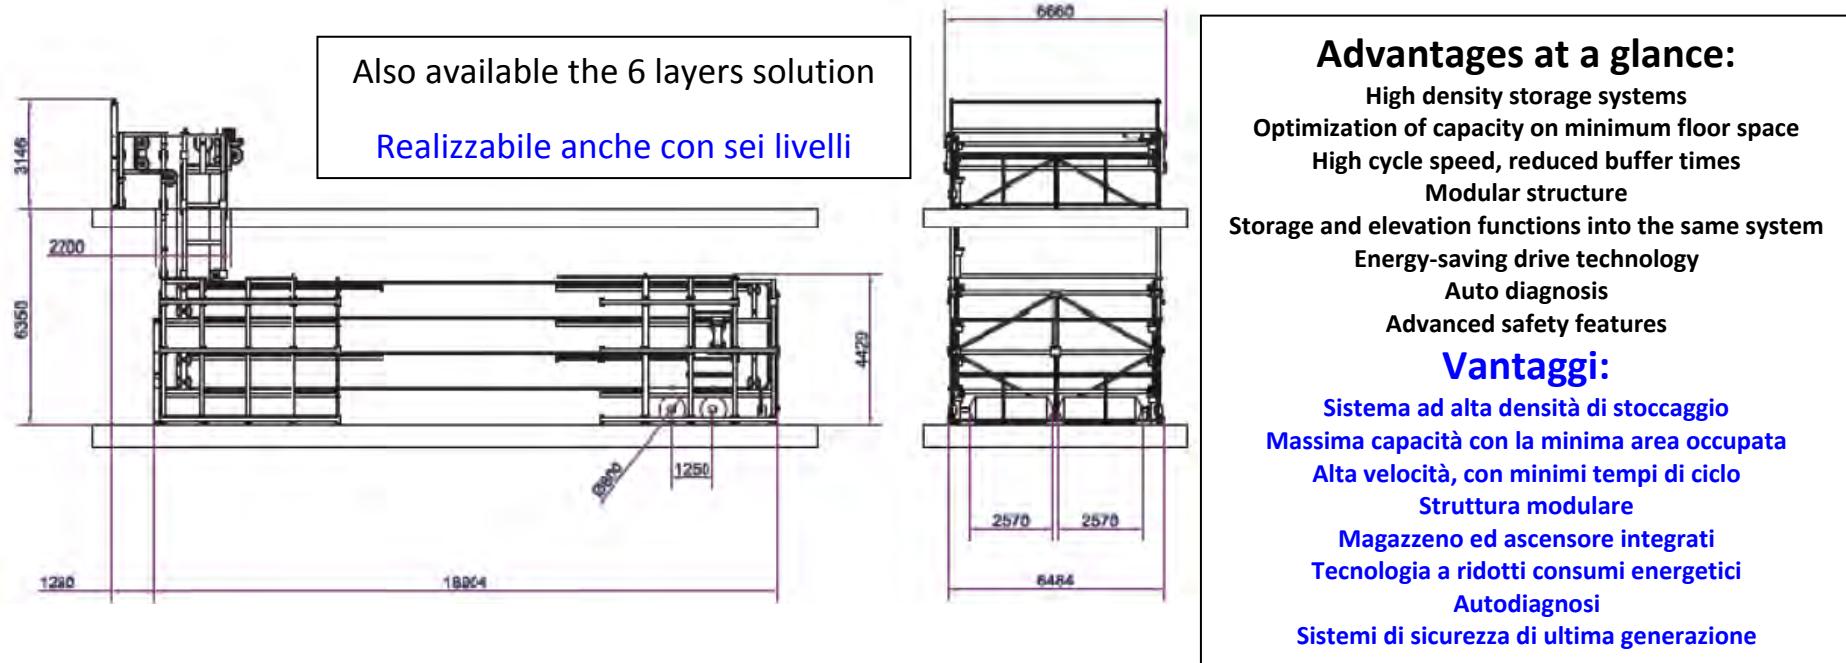

Максимальная вместимость минимальном пространстве.

Компактная конструкция из MRP предлагает значительное хранения полезной мощности с минимальным габаритным размерам в плане. Система может быть легко интегрирована на нескольких этажах здания, с несколькими точками доступа. Благодаря хранению высокой плотности вы получаете максимально возможную мощность. Каждый MRP может быть использован в качестве автономного решения или, при необходимости, могут быть вставлены в интегрированной системе. Эта модульная конструкция обеспечивает максимальную гарантию инвестиций в будущем.

DRIVE-IN SHELVING BY FERBER ETSUP TRUCK (this is the system with lower energy use)
SISTEMI DI SCAFFALATURE “DRIVE-IN” CON CARRELLO ETSUP (sistema con il minimo consumo energetico)

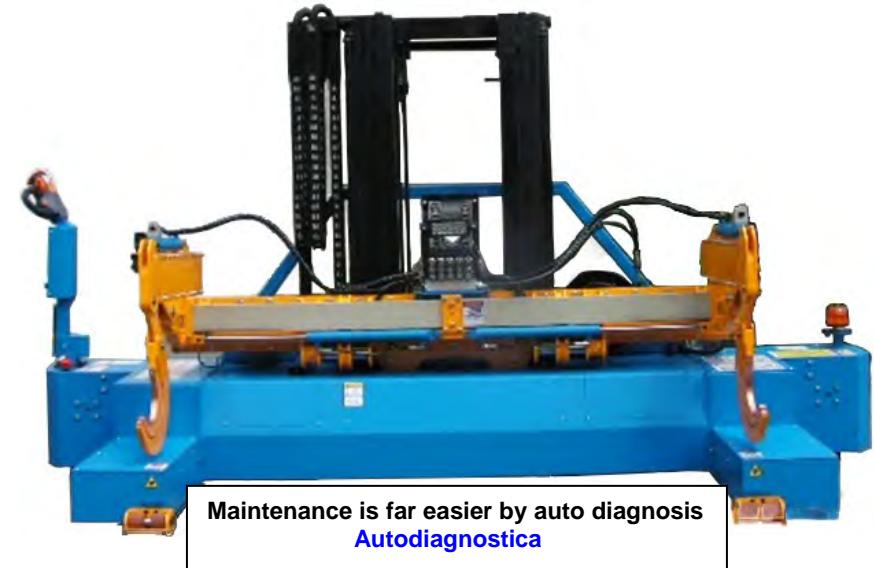

EXAMPLE: Electronic FERBER ETGSUP-3S TRIPLE MAST truck with forks for handling, loading and unloading THE WARP BEAM IN THE RACK

ESEMPIO: Carrello elettronico FERBER ETGSUP-3S TRIPLE MAST a forche per gestire, caricare, scaricare subbi in scaffalature

The **triple mast**, or "3-stage mast," is a truck that has three sections. The outer section is mounted to the lift truck. The intermediate section telescopes within the outer section. The inner section telescopes within the intermediate section. Both the intermediate section and the inner section elevate as the lift cylinders extend. In the most advanced version these masts are equipped with a center cylinder to allow the fork carriage to elevate some distance before the mast sections begin to extend. When lifting the fork carriage it first raises the full extent of the stationary outer mast channel known as the "free lift" dimension. After which both inner frames begin to extend - the inner most leading the way. This type of mast provides a shorter lowered height for a given lift height. Triple masts are usually used where overhead clearances such as doorways, are a concern.

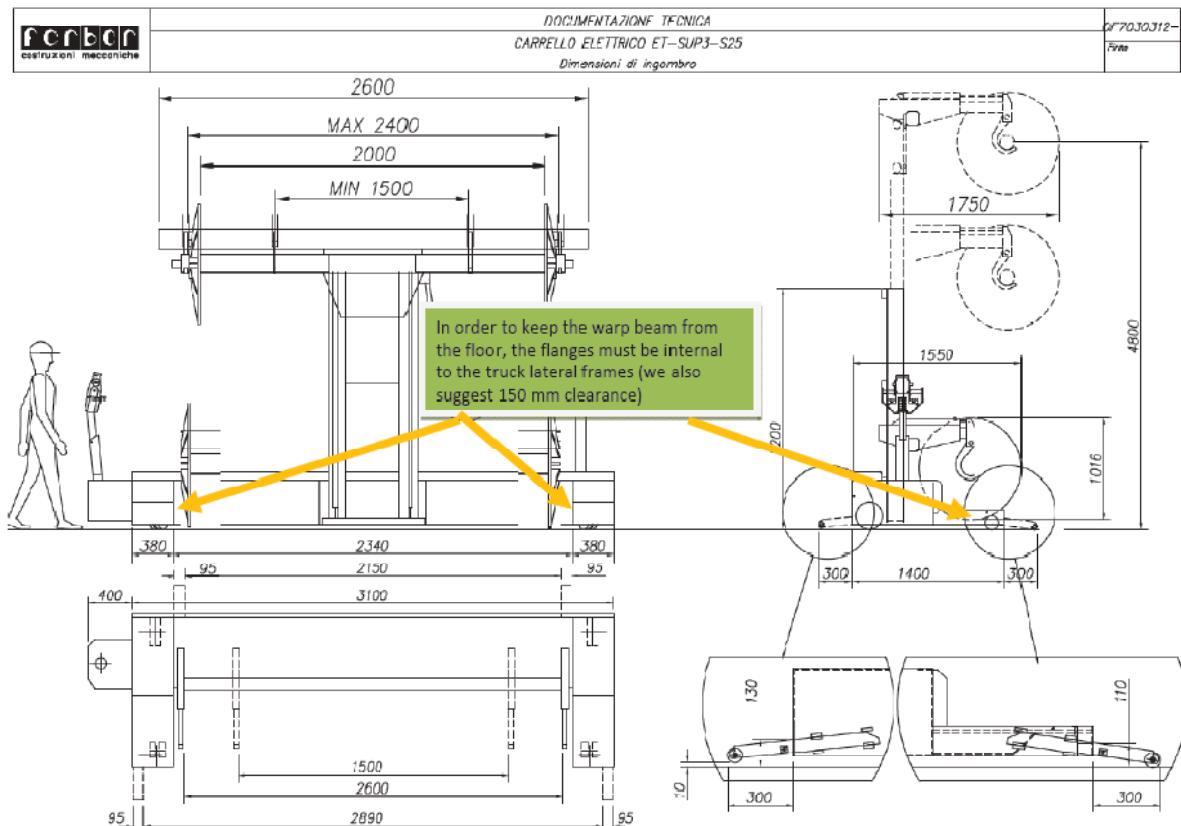

Il carrello "montante 3 stadi" ha tre sezioni. La sezione esterna è montata sulla base del carrello elevatore. La sezione intermedia scorre telescopicamente all'interno della sezione esterna e la sezione interna scorre in una guida telescopica all'interno della sezione intermedia. Sia la sezione intermedia che quella interna si alza quando i cilindri di sollevamento si estendono. Nella versione più avanzata questo sistema è dotato di un cilindro centrale per consentire al castello del montante di elevarsi, prima che le sezioni del montante stesso comincino ad estendersi. Questo modello, conosciuto come "alzata libera", solleva prima la base del castello solidale al montante esterno fisso, dopo di che il montante intermedio e quello interno iniziano ad estendersi. Questa soluzione consente di ottenere una altezza minima del carrello abbassato a pari altezza massima di sollevamento ed è particolarmente utile nel passaggio sotto strutture con limiti di altezza, quali porte ed impianti aerei o tubazioni.
